- Message Switching
- Web Services
- CMS DR Gateway
- Fibre / Copper / Wireless
- FTP Data Store
- UPS Switching
- Battery Alerts

**POWERBRICK** is a backhaul wholesale Alarm/Automation message switching network service for Central Monitoring Stations (CMS) and Telco call centres. The **POWERBRICK** network enables peering for Broadband service providers who require visibility over the UPS and **POWERBRICK** power server units that support customer's premises equipment (CPE) during power outages.

The **POWERBRICK** Network is compatible with all open standard Alarm/Automation protocols embedded in manufacture's equipment providing the **CMS** industry a proven switching and routing service. Making a connection to the **POWERBRICK** network requires no specialist network access equipment and all messages can be routed to multiple customer **CMS** locations simultaneously.

The **POWERBRICK** data switching center is housed in an audited AS2201.2 facility and provides a number of Web services including battery maintenance alerts, media conversion/relay and event storage.

**POWERBRICK** can also arrange home/business HUB or network access device installation service nationwide.
